Summary

Designed and developed data-driven backend systems using Python and SQL with strong foundations in data structures, algorithms, and system design. Built structured data validation workflows, automated reporting processes, and implemented relational database solutions. Strong interest in Data Engineering, Analytics, and AI-driven systems with a focus on clean architecture and scalable pipelines.

Experience

Careerkick Services – IT & Automation Intern Remote – Aug 2025 – Oct 2025

- Automated structured data tracking workflows for **1,000+ records**, improving reporting consistency.
- Built Python-based scripts to clean and validate datasets, reducing manual effort by **20–30%**.
- Documented operational processes and assisted in data validation for internal systems.

Ergon Enterprises – Data & Automation Intern Remote – Jul 2024 – Sep 2024

- Cleaned and structured operational datasets from **5+ sites** to enable consistent reporting.
- Developed Python scripts for automated data aggregation and weekly report generation, reducing effort by **25%**.
- Generated analytical summaries highlighting delays and resource trends for stakeholder reviews.

Projects

Data Processing & Reporting System – Python & SQL Dec 2025 – Jan 2026

- Built a structured data processing pipeline to replace manual aggregation in recurring business reports.
- Used **Python (data handling) + SQL joins and aggregations** to clean, validate, and transform datasets.
- Reduced reporting time by **30%** and improved data consistency across recurring analytics tasks.

Travel Planner Platform – Backend APIs & Data Validation Oct 2025 – Nov 2025

- Designed backend modules supporting **3+ user workflows** including booking and onboarding.
- Implemented **10+ REST APIs** with structured validation and relational database integration.
- Debugged and resolved **15+ data consistency issues** using SQL queries and log tracing.

Core Banking System & ATM Simulator – Java & SQL Feb 2024 – Apr 2024

- Built a transactional banking backend system simulating real-world ATM operations.
- Designed relational schemas and implemented transaction logic using **Java + MySQL**.
- Executed **100+ transaction test cases** to validate consistency, integrity, and edge cases.

Technical Skills

Programming: Python, Java
Data Handling: SQL (joins, aggregations, validations), relational databases
Foundations: Data Structures, Algorithms, OOP concepts
Cloud Exposure: AWS fundamentals
Tools: Git, VS Code, Postman

Achievements & Certifications

- SQL for Data Science** – Coursera (2025)
- Oracle AI Foundations Associate** – Oracle (2025)
- Led coordination of campus events with **3,000+ participants**.

Education

Vellore Institute of Technology 2022 – 2026
B.Tech in Computer Science Engineering, CGPA: 8.24/10
